ELSEVIER

Aims & Scope

NMR spectroscopy is now being applied not only in chemistry, physics and biochemistry, but also in many areas of biological science and medicine. This journal publishes review articles covering applications in all these and related subjects, as well as in-depth treatments of the fundamental theory and instrumental developments of NMR spectroscopy. The issuing of each volume in separate parts ensures the rapid appearance of the reviews, and thus gives readers the most up to date coverage of the subject.

Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. The transfer will ensure the widest possible dissemination of information
Special regulations for readers in the U.S.A. — This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pay through the Center the per-copy fee for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The per-copy fee is stated in the code-line at the bottom of the first page of each article. The appropriate fee, together with a copy of the first page of the article, should be forwarded to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, U.S.A. If no code-line appears, broad consent to copy has not been given and permission to copy must be obtained directly from the author(s). The fee indicated on the first page of an article in this issue will apply retroactively to all articles published in the journal, regardless of the year of publication. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.
No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.
Although all advertising materials is expected to conform to ethical (medical) standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

The paper used in this publication meets the requirements of ANSI INISO 239.48—1992 (Permanence of paper).

PROGRESS IN NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY

Subject Index, Volume 27

ABH antigens 450
Ab initio calculations 349, 380–381, 385–398
  methodology 385
  peptide models 387
Acidosis 534
Adiabatic demagnetization in the laboratory frame (ADLF) 656–657, 661, 696
Alkyl side-chain motion 577
Aluminium-blood plasma interaction 541
AMBER force field 388, 426
Amide H^N chemical shifts 334, 336
Amide susceptibility anisotropies 375, 382
Amino acid αH chemical shifts 333
Analogue-to-digital converters (ACDs) 487
Antimony–selenium compounds 294
Antithrombin III 463
Aromatic group motion, polymers 576, 614–617
Atherosclerosis 542–543

Bacterial glyco(peptido)lipid conjugates 468–469
Bendler and Yaris (BY) model 570, 579
BioMagResBank 329, 357
Bismuth–selenium compounds 253
Blood group antigens 450
Blood plasma, ^{1}H NMR 475–554
  biochemical aspects 481–486
  biomedical applications 533–547
  cancer detection and research 527–532
  experimental techniques 486–489
  mathematical data analysis 489–504
  metabolite quantification 504–527
Boron–selenium compounds 17, 64–65, 102, 125, 196–197
Bovine pancreatic trypsin inhibitor (BPTI)
  chemical shifts 346, 373–374, 378, 419–420, 428
  hydration water molecules 636, 639–640
Brownian dynamics simulation 566–567

^{13}C, ^{77}Se couplings 51–52
^{13}C NMR, relaxation, polymers 556–633
  applications 583–627
  dynamic modeling 563–583
  theory 557–563
^{13}C shifts, proteins 341–346, 406–409
  CFP–GIAO 390–391
  helix formation 416
  referencing 357
Cadmium–selenium compounds 253–255
Calbindin 419
Cancer, plasma lipoproteins 510, 527–533
Carbonmonoxy myoglobin 426
Carbonyl chemical shifts 406–407
Carr–Purcell–Meiboom–Gill echo 488
CBCA(CO)NH 411
Chain segmental motion 564–576
Charge field perturbation (CFP) 386–387
Charge field perturbation-GIAO 387–398
CHARMM 377, 383, 397
Chemical shift 477
  lipoprotein 547
  monosaccharides 446, 448
  oligosaccharides 449
  proteins 325–443
    ab initio calculations 385–399
    ^{13}C 341–346
    chemical shift index 350–356
    electric field effects, MSP 399–406
    ^{1}H 329–341
    ^{15}N 346–350

peptide conformation and folding 414–417
quantum approaches 385–410
referencing 356–363
ring current shifts 363–368
semiempirical approaches 381–385, 406–410
shift calculations by parameter fitting 368–381
similarity of solution structures 417–422
spectrum assignments 410–414
structure reference tool 422–432
^{77}Se 5–7, 9
inorganic compounds 11–18
metallic complexes 42–48
organoselenium compounds 18–42
Chemical shift anisotropy (CSA) 557–559
^{77}Se 8–9
Chemical shift index (CSI) 350–356
Chemical shift reference standards 357
Chemometric methods 490, 501–504, 532
Chiral recognition by ^{77}Se NMR 58
Cholestasis 536
Cholesterol 479, 520–524, 526–527, 544
Chondroitin sulphate oligosaccharides 465
Chromium–selenium compounds 257–258
Chronic renal failure 533
Chylomicrons 479
Classical reorientation, zero field NMR 677
Cobalt–selenium compounds 255–257
Conformational transition 564–567, 619
Cooperative transition pairs 566
Copper complex–blood plasma interaction 541–543
Copper–selenium compounds 258–259
Coronary heart disease 525, 527, 537
COSY, oligosaccharides 449
Coupling constants, ^{77}Se 48–56
CPMG spectra 538
Crankshaft motion 564, 569
Cross-correlation 561–562
Damped diffusion (DD) model 571
D.c., pulses, zero field NMR 696–710
Defensin peptides 418
Delta-function pulses 707
Deproteinized plasma 506–508
Derivative Hartree–Fock (DHF) theory 400
Dermatan sulphate 465
Diabetes 533
Diagonalization 686
Diamond-lattice models 569–571, 585–586, 590, 595, 597–601, 604
Diorganyl selenides 27–33
Dipolar coupling 49, 664–673
Dipole–dipole interaction (DD), ^{77}Se 8
Dipole–dipole relaxation 557–559
Diselenides 23–25
DNA, hydration water molecules 635, 637, 641
Double LeVel Crossing (DLVC) 651, 676
DQ–COSY map 351
Dual Substituent Parameter (DSP) 31
Dynamic modeling
polymers 563–583
chain segmental motion 564–576, 583–611
comparison of models 579–583
frequency-temperature superposition 623
modes of motion 563
side-group motion 576, 611–619
solvent effects 619–623
TCF and spectral density functions 567–579
WLF behaviour 624
zero field NMR, motion effects 673–692
Dynamic rotational isomeric state (DRIS) model 573, 579–580, 587–588
Dynamic simulation models 572

Electric field, chemical shifts, 370–371, 374, 376, 381–382, 390, 396, 399–406
ENZYMIX 404–405
Epidermal growth factor 434
Exchange operator 686

^{19}F, ^{77}Se couplings 52
^{19}F shifts, proteins 371
  GIAO 396–397
Field cycling
  electronic 655
  mechanical 654
  variations 656
Field switching 652
Finite perturbation (FPT)–INDO 394–395, 406, 409
Fish oil ω-3 fatty acids 537
FITPLA 514–515
FITPLA^C 490, 496, 518–519, 522
Flip model 667–668
Foetal distress 535
Forssman antigen 467
FORTRAN 499, 514
Fossel Index (FI) 527–528, 532
4D HCCH TOCSY 411
Fourier transform NMR 476, 478
Frequency domain analysis 490, 498–501
Frequency-temperature superposition 623

Gallium–selenium compounds 264
Gangliosides 455
Gauge invariant atomic orbitals (GIAOs) 387, 396
  -MP2 393
  -SCF 394, 396, 434
Generalized diffusion and loss (GDL) model 579
Germanium–selenium compounds 17, 26, 70, 103, 127, 197–198
Glass–rubber transition 624–627
Global fitting 372–376
Glycolipids 466–468
Glycopeptidolipids 468–469
Glycophosphoinositol anchors 467–468
Glycoprotein
  N-linked chains 465–466
  O-linked chains 456–457
  sialylated recognition determinants 451, 456
Glycosaminoglycans 463
Glycosaminoglycan keratan sulphate 457
Glycosphingolipids 467
Gold complex-blood plasma interaction 539
Gold–selenium compounds 250–252

^1H, ^{77}Se couplings 49–51
^1H chemical shift
  heparin 464
  monosaccharides 446, 448
  oligosaccharides 452–454, 458–462
  proteins 376–377
    electric field effects 399
    folding 416
    H_α, H_β and H^N secondary structure shifts 329–336
    random coil 433
    referencing 356
    regularities in helices 337–341
    ring current calculations 365–367
    ring current models 363
^1H NMR
  human blood plasma 475–554
    biochemical aspects 481–486
    biomedical applications 533–547
    cancer detection and research 527–532
    experimental techniques 486–489
    mathematical data analysis 489–504
    metabolite quantification 504–527
  750 MHz 538
  oligosaccharides 445–469
    antigens and recognition determinants 450–456
    mammalian glycolipids 466–468
    monosaccharides 445–450
    mycobacterial and bacterial 468–469
    N-linked glycoprotein chains 465–466
    O-linked glycoprotein chains 456–457
    proteoglycans 457–465
^2H–^1H dipolar coupling 672
^2H high field NMR 648
^2H zero field NMR 647–727
  calculation of spectrum 657–673
  d.c. and r.f. pulses 696–718
  experimental techniques 649–657
  magnetization correlation functions 678–679, 692–696

motion effects 673–692
2D 718–722
Haem proteins 365, 434
Hahn spin-echo 488, 505–506, 533
Haigh–Mallion ring current model 364–365, 380
Hall–Weber–Helfand (HWH) model 573–575, 577, 579, 598–599
Hankel–Lanczos SVD (HLSVD) 490–495
Hartree–Fock theory 387, 400
Heart graft rejection 536
Helical Worm-like Chain (HW) model 574
Helices, ^{1}H shift regularities 337
Helix dipole 337, 383
Helix formation 415, 433
Heparin 457, 463
Hevein, CSI 353–354
H_2SeO_3 5
Hydration water molecules 635–645
DNA 641
NMR 638
proteins 640
role of 643
X-ray crystallography 637
Hyperlipidaemia 531

Indium–selenium compounds 268–269
Individual gauge localized orbital (IGLO) 387, 394
INDO 394, 406
Interferon gamma, CSI 359–360
Interleukin-1β 421
Interleukin-1 receptor protein (IRAP) 421
Intermediate field levels 653
Iridium–selenium compounds 269–270
Iron–selenium compounds 259–263
Isotope effects, ^{77}Se NMR 8
Isotopic diffusion 689
Iterative Chemical Shift Analysis (ICSA) 422, 426–428

J-coupling
monosaccharides 446, 448
oligosaccharides 449
proteins 327, 413, 418
Se–H 49–55
Johnson–Bovey ring current model 364, 365, 380
Jones and Stockmayer (JS) model 570, 579, 590, 598–599
Jump motion in zero field 678–685, 689

Kick model 667–668
Kramers theory 619–620

Lactic acidosis 534
Lamor frequency 623
Lead–selenium compounds 276–277
Lewis antigens 451, 453
Liberation models 575–576
Liberational motion 676
Lipid peroxidation 542–544
Lipids, plasma 508–509
abnormalities 523, 526, 528
Lipooligosaccharides 468–469
Lipoprotein
^{1}H NMR 481–489
cancer detection and research 527–533
interaction and complexation studies 539–542
linear method 510–514
lipid peroxidation 542–544
mathematical data analysis 489–504
measurement at 750 MHz 538
metabolic applications 533–537
metabolite quantification 505–527
non-linear method 514–525
phase transitions 544, 546
size distributions and chemical shifts 545
structure and metabolism 478–481
Lipoprotein X 536
Lithium–selenium compounds 43, 270–272
Local field reaction (LFR) 381, 403–406
Localized orbital, local origin (LORG) 387
Localized MO (LMO) 395
Low molecular weight metabolites 505
Lung carcinoma 528
Lysozymes 418, 424

Magic angle spinning (MAS) 60

rhodium 293–294
ruthenium 294
silicon 17, 26, 98, 114–115, 147
silver 250
sulphur 11, 96, 109–114, 136–138, 216
tin 43, 294–301
titanium 301–303
transition metals 44–48
tungsten 46, 303–307
two carbon compounds 148–194
zinc 308–310
zirkonium 310
Selenium-containing aromatic rings 38–42
Selenium-containing enzymes 59
Selenium–77 NMR 1–323
chemical shifts 9–48
inorganic compounds 11–18
metallic complexes 42–48
organoselenium compounds 18–42
coupling constants 48–56
^{13}C 51
^{19}F 52
^{1}H 49
others 54
^{31}P 53
special techniques and applications 56–61
biochemical applications 59
chiral recognition 58
oriented selenium-containing molecules 59–60
solids, semiconductors and superconductors 60–61
two-dimensional 57
variable temperature 56
spectroscopic properties 5–9
isotope effects 8
medium effects 5–8
nuclear properties 5
referencing 5
relaxation and NOEs 8–9
tables of parameters 61–310
inorganic 64–117
metal and organometallic compounds 250–310
organic 118–249
Selenoanisoles 29–30
Selenocarbonates 33, 35
Selenocarbonyl compounds 37
Selenocyanates 32–33
Selenoesters 33–34
Selenoethers 28, 30
Selenolates 19, 20
Selenols 19, 20
Selenonium salts 36

Selenophene 38–40
Selenoxides 33
Selenyl amides 25
Selenyl sulphides 22
Self shift 374, 381–382
Semiconductors, ^{77}Se NMR 60
Semiempirical chemical shift calculations 368–385
Sequential assignment 327, 330, 342
Shielding polarizabilities 400–402, 404
Sialylated recognition determinants 451, 454
Side-group motion, polymers 576, 611–619
Silicon–selenium compounds 98–99, 115, 147, 195
Silver–selenium compounds 250
SIMCA 502, 504, 532
Singular Value Decomposition (SVD) 490–495
Skolnick and Yaris (SY) model 571
SMART 714
Solid state ^{77}Se NMR 60
Solution structures, chemical shifts 417, 422
Solvents
  polymer local dynamics 619–623
  ^{77}Se NMR 6
Spectra assignments, chemical shifts 410–414
Spectral density functions 558–562, 567–579
Spin-diffusion 720
Spin-echo 488, 505, 533
Spin-lattice relaxation 652
  ^{77}Se 9
Spin-locked spin-echo (SLSE) 710
Spin operators 659–660
Spin-rotation, ^{77}Se 8–9
Spin-1 systems 661–663
SQUID 649, 656
Stage specific embryonic antigen-1 (SSEA-1) 451
Star plots 531–532
Stereospecific assignments, chemical shifts 413–414
Structure refinement, chemical shifts 422–431
Structure relaxation 327, 388–389
Sudden zero field NMR 651, 653, 657, 697
Sulphur–selenium compounds 11, 96, 109–114, 136–138
SUPERCOSY 530
Surface-constrained all atom solvent (SCAAS) 404–405

Tantalum–selenium compound 301
Temperature, ^{77}Se NMR 7
Tetrahedral jumps 689, 694
Thallium–selenium compound 303
Thermodynamics, polymers 623
Thorium–selenium compound 301
3D NMR 326
Time-correlation factor (TCF) 557–559, 561–563, 567–579, 623, 627
Time domain analysis 490
Time-proportional-phase incrementation (TPPI) 709, 717
Tin–selenium compounds 43, 294–301
Titanium–selenium compounds 301–303
Torsion angle effects 390, 398
Total linewidth (TLW) 536
Training set 502
2,2,2-Trifluoroethanol 415–416, 433
Triglycerides 479, 520-524, 526–527
Trimethylamine-*N*-oxide (TMAO) 533
Tumour-associated antigens 457, 467
Tungsten–selenium compounds 46, 303–307
Tunnelling 673
2D ^{1}H–^{1}H COSY 530–531, 534
2D-JRES ^{1}H NMR 538–540
2D ^{77}Se NMR 57
2D zero field NMR 718–722

Uraemic toxins 533

Valeur, Jarry, Geny, Monnerie (VJGM) model 569, 579
Vanadium–selenium compound 303
Variable-temperature ^{77}Se NMR (DNNMR) 56
VARPRO 490, 495–499
Viscosity, polymer dynamics 619–623

Water, hydration molecules 635–645
DNA 641
NMR 638
proteins 640
role of 643
X-ray crystallography 637
Water resonance 487, 492–493
WATR–CPMG 508
Williams–Landel–Ferry (WLF) behaviour 624–627

X-ray crystallography, hydration water 637–638

Zero field NMR 647–727
calculation of spectrum 657–673
d.c. and r.f. pulses 696–718
experimental techniques 649–657
magnetization correlation functions 678–679, 692–696
motion effects 673–692
2D 718–722
Z-surfaces 426–428
Zinc fingers 418
Zinc–selenium compounds 308–310
Zirkonium–selenium compounds 310

PROGRESS IN NUCLEAR
MAGNETIC RESONANCE
SPECTROSCOPY

Contents of Previous Volumes

Volume 24

^{13}C NMR Spectroscopy of Oleanane Triterpenoids
P. K. AGRAWAL and D. C. JAIN

^{129}Xe NMR as a Probe for the Study of Microporous Solids: A Critical Review
P. K. BARRIE and J. KLINOWSKI

Simulation of 2D NMR Spectra for Determination of Solution Conformations of Nucleic Acids
A. MAJUMDAR and R. V. HOSUR

Structural Chracterization of Noncrystalline Solids and Glasses Using Solid State NMR
H. ECKERT

Multiple-Quantum NMR Methods
J. J. NORWOOD

Relaxation in the Rotating Frame in Liquids
T. E. BULL

Sodium Magnetic Resonance Imaging and Chemical Shift Imaging
S. J. KOHLER and N. H. KOLODNY

Quadrupolar Effects Transferred to Spin-$\frac{1}{2}$ Magic-Angle Spinning Spectra of Solids
R. K. HARRIS and A. C. OLIVIERI

^{51}V Solid State NMR Studies of Vanadia Based Catalysts
O. B. LAPINA, V. M. MASTIKHIN, A. A. SHUBIN, V. N. KRASILNIKOV and K. I. ZAMARAEV

NMR Studies of Superionic Conductors
D. BRINKMANN

Volume 25

NMR and Fractal Properties of Polymeric Liquids and Gels
J. P. COHEN ADDAD

Sulfur-33 NMR
G. BARBARELLA

Photo-CIDNP of Biopolymers
P. J. HORE and R. W. BROADHURST

NMR Studies of Drug–DNA Interactions
M. S. SEARLE

NMR Studies of Dynamics in Nucleic Acids
A. N. LANE

Density Dependence of Rotational and Translational Molecular Dynamics in Liquids Studied by High Pressure NMR
E. W. LANG and H.-D. LÜDEMANN

Volume 26

NMR of Noble Gases Dissolved in Isotropic and Anisotropic Liquids
J. JOKISAARI
Characterization of Biomolecular Structure and Dynamics by NMR Cross Relaxation
R. BRÜSCHWEILER and D. A. CASE
Artifacts in Two-dimensional NMR
A. D. BAIN, I. W. BURTON and W. F. REYNOLDS
Copper–Zinc Superoxide Dismutase: A Paramagnetic Protein that Provides a Unique Frame for the NMR Investigation
I. BERTINI, C. LUCHINAT and M. PICCIOLO
Variable Angle Sample Spinning NMR in Liquid Crystals
J. COURTIEU, J. P. BAYLE and B. M. FUNG
Multinuclear and Multidimensional NMR Methodology for Studying Individual Water Molecules Bound to Peptides and Proteins in Solution: Principles and Applications
I. P. GEROTHANASSIS
^{17}O NMR Studies of Hemoproteins and Synthetic Model Compounds in the Solution and Solid States
I. P. GEROTHANASSIS
Fluorine NMR of Proteins
J. T. GERIG
Isotope Labeling in Solution Protein Assignment and Structural Analysis
D. M. LEMASTER
Magnetically-oriented Phospholipid Micelles as a Tool for the Study of Membrane-associated Molecules
C. R. SANDERS II, B. J. HARE, K. P. HOWARD and J. H. PRESTEGARD
NMR Studies of Complex Surfactant Systems
O. SÖDERMAN and P. STILBS
NMR Studies of Translational Diffusion in Lyotropic Liquid Crystals and Lipid Membranes
G. LINDBLOM and G. ORÄDD
Recent Developments in Transferred NOE Methods
FENG NI
